Recommender Systems

- ▶ Automated recommendations
 - ▶ Less obvious: Silently select and rank the items
 - ▶ News feeds, ads (in some sense)

Because of your interest in Trump

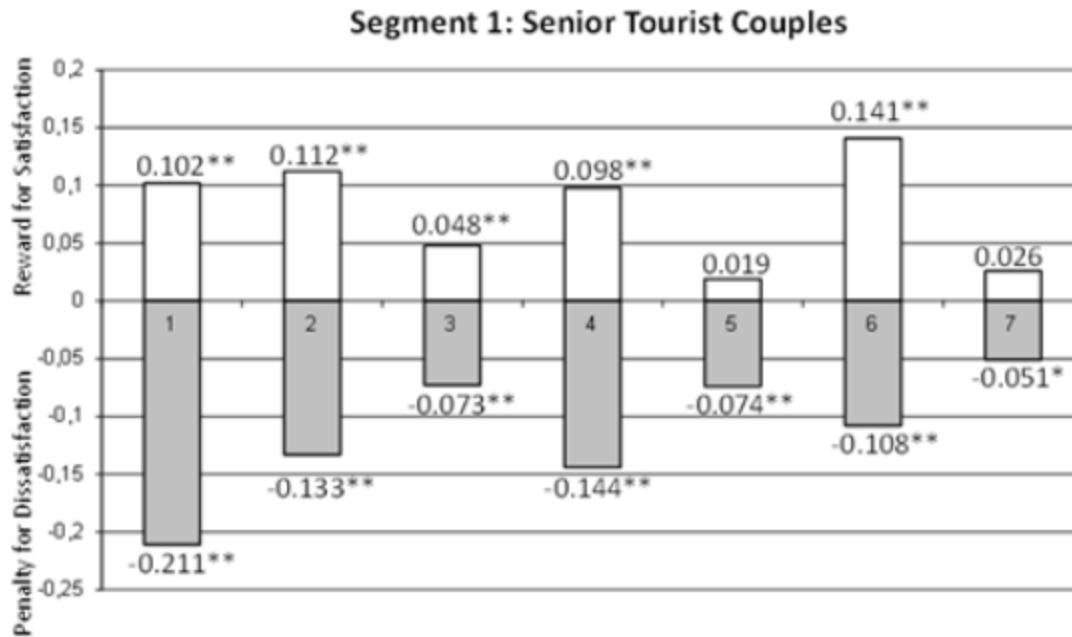

...

Recommender Systems in e-Tourism

- ▶ Potential value for different stakeholders
-
- ▶ For tourists, e.g.,
 - ▶ Pre-trip information gathering and decision making
 - ▶ Add-on service during the trip (e.g., POI recommendation)
 - ▶ For service providers, e.g.,
 - ▶ Differentiation from the competition
 - ▶ Influencing user behavior
 - ▶ Means for information gathering (user preferences)

Penalty-Reward Models

Particularities in e-Tourism

- ▶ “Customers who bought ... also bought”
 - ▶ Can only be applied for some e-Tourism scenarios
 - ▶ E.g., “People who visited the Eiffel Tower,”
 - ▶ Recommendations often based on complex machine learning models and monitoring user behavior
- ▶ In many other scenarios, more fine-grained and **interactive** approaches are required
 - ▶ Need to **understand the detailed customer preferences**, e.g., regarding the desired amenities of a hotel
 - ▶ Need to **explain the recommendations** to the tourist to be adopted (trusted)

Ultimately ...

- ▶ Interactive recommendation and advisory as part of future **tourism experience**
- ▶ Services during different phases, e.g.,
 - ▶ Pre-trip decision making
 - ▶ POI selection and tour planning during the trip
 - ▶ Activity recommendation (e.g., sports, restaurants)
 - ▶ Location-based services
 - ▶ Proactive notifications
- ▶ Explicit preferences and context are relevant
- ▶ Requires more elaborate interaction mechanisms
- ▶ Side effect also:
 - ▶ New opportunities for analytics

HOME CALL BACK SERVICE RECOMMENDATIONS

Think about what you'd really like and I'll see what I can come up with for you.

Mr Jannach, how do you feel right now? What would you like to improve if it were possible?

- I feel quite tired and would like to recharge my batteries
- I would like to improve my fitness.
- I would like to lose some weight and be slimmer.
- I often feel tense and sometimes have problems with my back.
- I would like to do something about my appearance and my image.
- I feel perfectly healthy and would simply like to relax for a few days.

Jannach, D., Zanker, M. and Fuchs, M.: "Constraint-based recommendation in tourism: A multi-perspective case study". Information Technology & Tourism. Springer Nature, 2009, pp. 139-156

An interactive recommender

The screenshot shows a web browser window with the URL <http://www.configworks-gmbh.online.de>. The page title is "VIBE - the virtual adviser for the Warmbad-Villach spa reso...". The page features a navigation bar with "HOME", "CALL BACK SERVICE", and "RECOMMENDATIONS". The main content area is titled "VIBE VIRTUAL ADVISER" and includes a logo of a stylized mountain range. A woman in a red dress is shown on the left, with a speech bubble that says: "Wonderful, we've now got to your final selection. Here's my recommendation for you ...". The main recommendation is for a "Feel well week" package, with details as follows:

Length of stay:	per week (7 nights) per person	
Meals:	Half board	
Accommodation:	The Warmbaderhof	Details
Dates:	At any season	Why?
Rate in single room:	from € 1595	
Rate in double room:	from € 1595	

Below this package, an information icon (i) is followed by the text: "I can also recommend the following packages:" and a bullet point: "You can book a personal massage or a whole massage programme for your stay at any time."

The next recommendation is for a "Golf & Spa" package, with details as follows:

Length of stay:	per week (7 nights) per person	
Meals:	Half board	
Accommodation:	The Warmbaderhof	Details
Dates:	01.04.2008-31.10.2008	Why?

At the bottom of the page, there are four buttons: "Back", "Restart", "Print", and "Online-request". The status bar at the bottom left shows "Fertig" and a green checkmark icon.

Fertig

Everything solved?

- ▶ Just add some speech recognition, natural language understanding, and language generation features
 - ▶ And (deep) machine learning, to avoid knowledge engineering bottlenecks
-

- ▶ Probably not
- ▶ Interacting is not only asking for preferences
 - ▶ How to help the user understand the range of options?
 - ▶ How to determine what to ask in which way?
 - ▶ How to help the user express the preferences?
 - ▶ How to convince or persuade the user or make them trust in the recommendations?

User interaction in recommenders

- ▶ In Computer Science, at least, a niche topic
 - ▶ Complex machine learning models dominate
 - ▶ Research is very scattered
- ▶ A number of dimensions discussed in the literature
 - ▶ **Dialog aspects - Critiquing** : Present an option and let user give feedback (e.g., “less expensive”)
 - ▶ **User modeling - Personality-based approaches**: Try to find destinations that match the tourists personality (e.g., work at TU Wien)
 - ▶ **Visualization**: Use 2D or 3D landscape to help users understand the range of options
 - ▶ **Explanations**: e.g., to persuade a user

Sold by **BBro Store** and **Fulfilled by Amazon**. Gift-wrap available.

Item Display Length:

32.0 inches

- Made from lightweight high grade Aluminum alloy for faster swing speed
- Ultra-thin 32" handle with All Sports grip for increased stability and accuracy
- Stylish design featuring full rolled-over end for ultimate performance
- Ideal for all levels of baseball players from practice to matches
- 32 inches in length & 24 ounces

Explaining Recommendations

- ▶ Explanations can serve various purposes, e.g., (Tintarev and Masthoff)
 - ▶ Increase the (perceived) **transparency** of the recommendations, help users develop trust, increase their satisfaction
 - ▶ **Justify** the recommendations, and thereby increase the persuasiveness of the system
 - ▶ Help users make better decisions (**effectiveness**)
 - ▶ Help users make decision faster (**efficiency**)
- ▶ What we consider particularly important here:
 - ▶ Explanations as a starting point to **user control**
 - ▶ Generally important for future applications

User Control

- ▶ Let users influence the recommendations
 - ▶ Explicitly define their **preferences**, e.g., on Google News
 - ▶ Giving **feedback** to recommendations, as is possible, e.g., on Spotify
 - ▶ Let users **choose** the recommendation **strategy** (only in academia)
 - ▶ **Explain the** user the recommendation rationale and **let users correct** assumptions
 - ▶ Complex visualizations in academia
 - ▶ More simple approaches in industry

Don't use for recommendations

More research is required

- ▶ Preliminary survey among CS students
- ▶ Research questions:
 - ▶ Do people know about the feedback and control functionality?
 - ▶ Do they use it?
 - ▶ If not, why not?
- ▶ Two-stage study based on questionnaire
 - ▶ 75/26 participants
 - ▶ 1st stage: "Do you know/use it?"
 - ▶ 2nd stage: "Why do you not use it?"
(Free-text answers)

Outcomes

- ▶ 93% say they know there are possibilities to influence recommendations
- ▶ 16% are aware of the special page with feedback/control functionality
- ▶ 8% have ever used the feedback/control functionality

- ▶ Even though
 - ▶ 53% said the functionality was clear or very clear, and
 - ▶ 24% said it could be guessed

But why not using it?

Opportunities and Challenges

- ▶ Interactive and context-aware recommendation helpful in various tourism scenarios
 - ▶ Hotel search, itinerary planning, POI selection, in-trip proactive recommendations
 - ▶ Can improve the **tourism experience** in general
- ▶ Huge potential in two ways:
 - ▶ Allows for better, **personalized services** in the future based on tourism analytics.
 - ▶ Much more fine-grained knowledge about the user becomes available for analytics
 - ▶ E.g., unknown or unexpected preference patterns

Opportunities and Challenges

- ▶ But:
 - ▶ Appropriate user interface mechanisms required
 - ▶ Usability on mobile devices
 - ▶ Perhaps the UI has to be adapted to the individual users (beyond “basic” and “expert” modes)
- ▶ In the future:
 - ▶ Better integration of various information sources, including social ones
 - ▶ Usage of capabilities of modern smartphones
 - ▶ Various sensors

Summary

- ▶ RS as a means to enhance the tourism experience
- ▶ Next generation of interactive recommenders (in tourism) should address the open issues
 - ▶ Needs interdisciplinary approach
 - ▶ And the user in the loop

- ▶ Thank you - Questions?
